The motor ratings listed in the selection and ordering data are rough guide values. The configuration of the soft starter should always be based on the required rated operational current of the motor. The 3RW soft starters are designed for simple starting conditions. In the event of more more exacting requirements, it may be necessary to choose a larger device. In some cases, however, the safety margins taken into account in the selection also permit the listed units to be used in boundary conditions which are slightly more demanding.

For detailed technical specifications for a configuration that is tailored exactly to the application, [see the manuals:](http://support.automation.siemens.com/WW/view/en/38752095)

 Siemens recommends the use of the Win-Soft Starter selection and simulation program.

Motor rating data in kW and hp are based on IEC 60947-4-1.
